## NOTES: Section 5.1 – Use Properties of Exponents

Goals: #1 - I can simplify an expression using the properties of exponents and explain my reasoning using these properties.

#2 - I use the properties of exponents to write an expression for a figure's area or volume in terms of  $x$ .

*Homework: Lesson 5.1 Worksheet*

**Exploration #1:** Work with a partner and answer the following questions.

1. What happens when you multiply two powers with the same base? Write the product using exponents.

a.  $(2^2)(2^3) =$

b.  $(x^2)(x^6) =$

- c. Write a general rule for finding the product of two powers with the same base.

$$a^m \cdot a^n = a^{\boxed{\phantom{000}}}$$

2. What happens when you divide two powers with the same base? Write the quotient using exponents.

a.  $\frac{2^5}{2^2} =$

b.  $\frac{x^6}{x^3} =$

- c. Write a general rule for finding the quotient of two powers with the same base.

$$\frac{a^m}{a^n} = a^{\boxed{\phantom{000}}}$$

3. What happens when you find a power of a power? Write the expression using exponents.

a.  $(2^2)^4 =$

b.  $(x^3)^3 =$

- c. Write a general rule for finding a power of a power.

$$(a^m)^n = a^{\boxed{\phantom{000}}}$$

Name: \_\_\_\_\_ Hour: \_\_\_\_\_ Date: \_\_\_\_\_

4. What happens when you find a power of a product? Write the expression using exponents.

a.  $(5 \cdot 4)^3 =$

b.  $(3x)^2 =$

- c. Write a general rule for finding a power of a product.

$$(a \cdot b)^m = a \square b \square$$

5. What happens when you find a power of a quotient? Write the expression using exponents.

a.  $\left(\frac{2}{3}\right)^2 =$

b.  $\left(\frac{x}{2}\right)^2 =$

- c. Write a general rule for finding the quotient of two powers with the same base.

$$\left(\frac{a}{b}\right)^m = \frac{a \square}{b \square}$$

6. Evaluate the following exponents:

a.  $10^1 =$

b.  $10^2 =$

c.  $10^3 =$

d.  $10^0 =$

Use your calculator to evaluate the following exponents and write your answer as FRACTIONS :

a.  $10^{-1} =$

b.  $10^{-2} =$

c.  $10^{-3} =$

- d. Write a general rule for finding negative powers.

$$a^{-m} = \frac{1}{a} \square$$

- e. Write a general rule for finding powers of 0.

$$a^0 = \square$$

# Properties of Exponents:

Property:	Algebraic Expression:	Example:
Product of Powers Property		
Power of a Power Property		
Power of a Product Property		
Negative Exponent Property		
Zero Exponent Property		
Quotient of Powers Property		
Power of a Quotient Property		

Name: \_\_\_\_\_ Hour: \_\_\_\_\_ Date: \_\_\_\_\_

**Example #1:** Evaluate the expression. Write your answer using exponents and as a simplified fraction. NO DECIMALS.

1.  $3^{-4}$

2.  $(2^8)^2$

3.  $\left(\frac{1}{2}\right)^{-3}$

**You practice:** Evaluate the expression. Write your answer using exponents and as a simplified fraction. NO DECIMALS.

1.  $(3^{-2})^3$

2.  $\frac{8^{-4}}{8^{-6}}$

3.  $(-2)^3 \cdot (-2)^6$

4.  $[(-4)^3]^2$

5.  $\frac{5}{2^{-3}}$

6.  $-100^0$

**Example #2:** Simplify the expression. Evaluate all integers to powers. NO DECIMALS.

1.  $(2d^5e^{-2})^{-3}$

2.  $\frac{(2e)^{-4}g^5}{e^5g^{-3}}$

3.  $\frac{x^{-4}y^3}{3y^{-2}} \cdot \frac{y^3}{x^4}$

**You practice:** Simplify the expression. Evaluate all integers to powers. NO DECIMALS.

1.  $\left(\frac{s^3}{t^{-4}}\right)^{-2}$

2.  $(7y^2z^5)(y^{-4}z^{-1})$

3.  $\frac{(x^{-3}y^3)^2}{x^5y^6}$

Name: \_\_\_\_\_ Hour: \_\_\_\_\_ Date: \_\_\_\_\_

4.  $\left(\frac{a^2b^{-1}}{2a^3b^2}\right)^3$

5.  $\left(\frac{6x}{y^2}\right)^{-2} \cdot 12x^4y^{-10}$

6.  $\frac{2x^{-8}y^5z^{-7}}{4x^{-2}y^5z^{-8}}$

**Example #3:** Write an expression for the figure's area of volume in terms of  $x$ .

1.  $V = \pi r^2 h$
